DI Box :

- 3 x DI Box active
- 1 x DI Box passive Monacor
- 1 x Proco CB-1 single DI box passive

Hardware : Corresponding cables and stands

Electricity for musicians and technicians

Please bring your adapters along (FR->CH / GB->CH / IT->CH) in order to avoid connections problems. Swiss system is 230V / 10 A per outlet.

We own on stage 1 x Euro 3 x 16A (red) and 1 x Euro 1 x 16 A (P17, blue).

Miscellaneous

No backline available in the venue unless several days prior demand.

The PA is able to deliver about 103 dB/A continuous in front of the stage (90 persons, main audience) and the back of the hall is equipped with delays (40 people).

In addition, a **98 dB/A** level is highly recommended in the middle of the hall, in respect with the swiss laws and the audience.

The mix booth is completely at the back of the hall. Please provide a sufficient sound-check time.

You can't easily boost the mike's level, because of the PA being close to the stage and because of the ceiling being slightly low; to be more comfortable, bring your

own preamp and para EQ (eg TC or Midas preamp) along if you have one but not obligatory.

Stage dimensions

Height : 3 m / width : 4 m / Depth : 3.50 m

Light

16 PAR 56

2 PC 500 W

Limited color filters: blue ; red , orange ; skin.
